# Data Generator for Learning to Graph

Step 1: Fill the chart below with the information generated for you by the program. The program generated the data in columns, but to save space on the page you will be recording it in rows

Step 2: Create a graph of your data following all the rules of good graphing. Make sure you work neatly to display your graph on the axes below

Step 3: Give the equation for your graph and tell the type of relationship in the space below
