# Battery Rating Problem

Step 1: Fill in the voltage and rating of your battery and the current being read by your meter

Step 2: Use the factor-label method to show how you turn the rating of the battery into energy stored in the battery

Step 3: Neatly show your calculation for charge stored on the battery

Step 4: Show your calculation of the time in minutes that the battery would be able to light up the bulb.   Enter your answers into your program to check that you did everything properly
