

## Wave Properties from Graph 2

Step 1: Carefully sketch out your wave graph on the axes below

Step 2: Explain how you got the amplitude of your graph in the space below

Step 3: Explain how you got the period for your graph in the space below

Step 4: Explain the connection between period and frequency and then neatly show the calculation that you did to find the frequency of your graph. Enter your answers into the program to verify that you did everything correctly
